### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Richard J. Streit on 05/12/05.

The application has been amended as follows:

Claims 3-18 have been canceled.

The abstract has been re-written as follows:

-- The present invention relates to a liquid crystal display, comprising a lower alignment film formed on a lower substrate; an upper alignment film formed on an upper substrate; a liquid crystal layer sandwiched between the lower and upper substrates; a phase compensation film adhered on the outer surface of the upper substrate and a polarizer adhered on the phase compensation film wherein the lower alignment film has an alignment angle of 10-20° with respect to a horizontal line, the upper alignment film has an alignment angle of 40 to 55° with respect to a horizontal line, the liquid crystal layer has a phase delay value ( $d\Delta n$ ) of 0.24-0.27  $\mu\text{m}$ , the phase compensation film has a phase compensation function of  $\lambda/4$  and also has an optical axis making 140-146° with a horizontal line and the polarizer has an absorption axis making 120 to 122.5° with a horizontal line.--

***Allowable Subject Matter***

2. Claims 1 and 2 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The prior arts of record do not anticipate or render obvious to one skilled in the art a liquid crystal display comprising various elements as claimed, more specifically the limitations such as the lower alignment film having an alignment angle of 10-20° and the upper alignment film having an alignment angle of 40 to 55° with respect to a horizontal line, the liquid crystal layer having a phase delay value ( $d\Delta n$ ) of 0.24-0.27  $\mu\text{m}$ , the phase compensation film having a phase compensation function of  $\lambda/4$  and also has an optical axis making 140-146° with a horizontal line and the absorption axis of the polarizer making an angle of 120 to 122.5° with a horizontal line, are considered novel.

4. All the prior arts cited alone or in combination discloses a liquid crystal display having a similar structure as claimed, but fail to teach or suggest the specific characteristics of the alignment films, phase compensation film, the liquid crystal layer and the polarizer.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
